Honors-Awards

Winner at INC 2024

Winner at MINEd Hackathon'24

Gaurav Boob

Software Engineer 2 at FIS || Research @PICT || Graduated Pune
Institute of Computer Technology || Startup enthusiast || Data
Science enthusiast

Pune District, Maharashtra, India

Summary

As a Software Engineer with a strong foundation in computer science and data science, I specialize in developing scalable and secure software solutions. Currently at FIS Global, I focus on enhancing transaction security and optimizing backend solutions, consistently improving transaction efficiency and data compliance. In addition to my industry experience, I have a background in academic research, where I contributed to projects on Diabetic Retinopathy detection and Lipreading for Indian-accented English. My work involved training advanced models and creating unique datasets, achieving state-of-the-art accuracy rates that have earned recognition and publication opportunities. My passion lies in building solutions from scratch, whether it's backend architecture, deep learning models, or innovative applications in Computer Vision. Skilled in Python, Java, and frameworks like Spring Boot, I also leverage SQL, Tableau, and Power BI to drive data-driven insights and automation. Driven by a "learning by building" approach, I'm eager to tackle complex problems and bring impactful projects to life. Let's connect if you're interested in collaborating on solutions that bridge technology and real-world applications.

Experience

FIS

1 year 6 months

Software Engineer 2

February 2026 - Present (5 months)

Pune, Maharashtra, India

Software Engineer 1

January 2025 - February 2026 (1 year 2 months)

Pune

- Worked with the Payments team, focusing on US payment methods like Wire transfers, and ACH.

Led enhancements for State Street Bank by integrating new recipient SWIFT code fields across the payment import pipeline, including backend services, database integration, and Angular-based UI components.

- Collaborating with DBAs to optimize data retrieval queries for improved performance and scalability in high-volume payment workflows.
- Enhanced international wire payments by adding support for additional fields (e.g., Sender-to-Receiver information) during payment import and template loader processing.
- Implemented robust validations and business logic to ensure data integrity and compliance in payment processing.

Dragonfly Financial Technologies

Associate Software Engineer

July 2024 - January 2025 (7 months)

Pune, Maharashtra, India

- Built robust payment systems using Angular and Spring Boot that improved transaction security by implementing advanced encryption methods, ensuring seamless financial operations for over 10,000 users daily.
- Implemented sensitive data logging fixes, including account number and details masking, across 50+ key modules to meet compliance and security standards.
- Enhanced backend solutions and optimized APIs through Spring Boot, resulting in a 30% improvement in response time for transactions across the payments platform while ensuring system reliability during peak usage periods.

Pune Institute of Computer Technology

Undergraduate Research Assistant

January 2023 - May 2024 (1 year 5 months)

Pune, Maharashtra, India

- Conducted an extensive research in the Deep Learning lab at PICT, focusing on the classification of Diabetic Retinopathy.
- Implemented pre-processing techniques such as CLAHE, Subtract Mean Processing, etc. Fine tuned YOLOv8x model, achieving a classification accuracy of 95%.
- Research work is currently under consideration for publication.

Dragonfly Financial Technologies
Associate Software Engineering Intern
January 2024 - March 2024 (3 months)
Pune, Maharashtra, India

- Worked closely with DBAs to identify performance bottlenecks, implementing query optimizations that reduced execution time by 30% and hence leading to faster data retrieval and improved overall system responsiveness.
 - Wrote Katalon automation scripts for faster, more accurate releases.
- Enhanced an in-house automation tool, improving test coverage and reducing manual effort.

Vasundharaa Geo Technologies Pvt Ltd
Data Science Intern
September 2022 - November 2022 (3 months)
Pune, Maharashtra, India

- Led advanced tech stack utilization, employing Computer Vision and Image Segmentation techniques such as U-Nets to achieve 87% mAP for semantic mask generation.
- Conducted extensive research on image pre-processing techniques, including normalization and augmentation, resulting in a 25% reduction in processing time for satellite images, which improved workflow efficiency and data analysis turnaround.

Substack
Content Writer
August 2022 - October 2022 (3 months)
Pune, Maharashtra, India

I started documenting my journey of learning Data Science on Substack, where I write about the different courses I've followed, roadmaps, share interesting articles, and much more.

Education

Pune Institute of Computer Technology
Bachelor of Engineering - BE, Electrical, Electronics and Communications Engineering · (2020 - 2024)

Nashik Cambridge School
Schooling · (2010 - 2018)
